## Education

**Tufts University**, Medford, MA

*Expected May 2027 / GPA: 3.8*

B.S. Computer Engineering, Minor in Mathematics | Study abroad: Universidad Carlos III de Madrid (Spring 2026)

## Experience

**Antarctica Capital**, Software Engineer

*New York, NY / Jun 2026 – Present*

- Shipped a **portfolio and market color dashboard** to production on Octantis, the firm's internal platform (Python, TypeScript, AWS), custom-built for the structured-products desk: security holdings alongside live market color from **5+ sources** in one view, with in-depth analysis on **thousands of securities daily**; used daily by the desk's traders and analysts, saving an estimated **5 hours per person per week**
- Designed it side by side with a senior structured-products lead; now the firm's **blueprint for complex dashboards** on Octantis
- Built the end-to-end **data ingestion pipeline** behind it on AWS (raw feeds to Iceberg to transformation to RDS to Octantis), unifying Bloomberg, Empirisign, TARA, S&P Liquidity, and Clearwater at **millions of records per day**; wrote a time-aware Bloomberg message parser handling thousands of messages daily and optimized serverless execution to cut refresh time
- Built a **credit dashboard** with CLO relative value analytics and security commenting, adopted by the **full Credit team**; demoed to firm executives and retained part-time to build a **portfolio management system**

**Watershed Ventures**, AI Software Engineering Intern

*New York, NY / May 2025 – May 2026*

- Designed and shipped a production **multi-agent VC intelligence platform** that sources and scores **thousands of companies per day** and generates investment memos for **tens to hundreds of companies per month**; in daily use by the fund
- Built agentic enrichment and evaluation pipelines with schema validation, retries, and tracing to make LLM outputs consistent and debuggable
- Owned infrastructure end to end: Python/FastAPI on **AWS**, **PostgreSQL**, and a **Next.js** dashboard on Vercel, built for reliability under continuous workloads

**Engineers Without Borders**, Technical Lead

*Medford, MA / Aug 2024 – May 2025*

- Led a 10–20 member subteam building a real-time water catchment monitoring system: Arduino sensing, calibration, failure detection, and documented field deployment procedures

**Tufts University**, Teaching Assistant, CS 11

*Medford, MA / Sep 2025 – Dec 2025*

- Led labs and office hours for 100+ students; graded assignments and exams with feedback on correctness and edge cases

**SoundSense, LLC**, Engineering Intern

*Wainscott, NY / Jun 2024 – Aug 2024*

- Ran measurement-driven analysis for acoustical field studies and delivered calculations used in client reports; built Excel, QuickBase, and SketchUp modeling workflows

## Projects

**LEGv8 64-bit Pipelined ARM CPU** (*VHDL, GHDL, GTKWave*)

[\*Project Page\*](#)

- 5-stage pipelined 64-bit CPU with forwarding and hazard detection, verified with cycle-accurate simulation

**Smoosh Bros, FPGA Fighting Game** (*SystemVerilog, iCE40UP5K*)

[\*Project Page\*](#)

- Two-player fighting game fully in hardware with 640x480 VGA output and NES controller input; sprite rendering, collision detection, and game state logic

**HandJam, Embedded ML Instrument** (*Python, C, TensorFlow, STM32*)

[\*Project Page\*](#)

- Real-time gesture recognition on an STM32 mapping ASL numbers to musical notes; 2,000 training images, 90–100% accuracy in controlled conditions

**Rndyr**, AI study video generator (*Next.js, Remotion, Python*)

[\*Project Page\*](#)

- Pipeline turning student notes into narrated explainer videos: LLM script generation, programmatic slide rendering, automated slide-to-video assembly, and custom KaTeX/LaTeX rendering for math and science notation; **used weekly by 30+ university students**

## Technical Skills

**Hardware/Embedded:** STM32, Arduino, Raspberry Pi, FPGA (iCE40), GHDL, GTKWave, CAD

**Languages:** C, C++, VHDL, SystemVerilog, Python, TypeScript/JavaScript, SQL

**Infrastructure:** AWS, Apache Iceberg, RDS, PostgreSQL, Docker, Git, Linux

**Frameworks:** React, Next.js, FastAPI, Node.js, TensorFlow

**AI Systems:** Multi-agent orchestration, LLM tool use and MCP, evaluation and validation pipelines, secure agent sandboxing
